

Qoustic Wound
Therapy System™
Model AR1XXX Series

FOR IMMEDIATE RELEASE:

Arobella Medical Announces European CE Mark Approval of Qoustic Wound Therapy System™

MINNEAPOLIS, MINNESOTA , March 18, 2009 – Arobella Medical, LLC, announced European CE Mark approval of its Qoustic Wound Therapy System™ medical device for ultrasound aided wound care.

The wound therapy system uses a unique, dome-shaped curette tip to apply low-frequency, cavitation ultrasound to wounds. The combination of physical design and ultrasonic energy gently removes dead and diseased tissue cells, kills harmful bacteria and biofilm, and leaves healthy and pre-healing granulation tissue intact. The device is FDA-cleared and is already on sale in the United States.

“The Qoustic Wound Therapy System device offers cutting-edge ultrasound technology several generations ahead of its competitors,” said Eliaz Babaev, PhD, president and CEO of Arobella Medical. “We look forward to bringing this device to the international market. Arobella Medical continually strives to be the best in ultrasound, and we have the data to prove it.”
